Lucknow, Uttar Pradesh, India • +91 8004745300 • dharmendra.dev2003@gmail.com • linkedin.com/in/dharmendradev2003 • github.com/dharmendra0107 • Portfolio

PROFESSIONAL SUMMARY

DevOps Engineer with 2+ years of hands-on experience in production deployment, Linux system administration, cloud infrastructure, and automation. Experienced in deploying and maintaining 5+ live production systems, with hands-on expertise in Microsoft Azure, Azure Landing Zone concepts, Terraform (Infrastructure as Code), Docker, Git, GitHub Actions, and CI/CD. Skilled in infrastructure provisioning, automated build and deployment pipelines, Linux troubleshooting, Nginx configuration, and production release management.

KEY HIGHLIGHTS

- Own end-to-end deployment and infrastructure management for 5+ live production systems (ERP, MIS, Hospital Management, SaaS) across VPS, Hostinger, shared hosting, and Linux environments.
- Hands-on with Terraform (IaC) and Azure Landing Zone concepts, provisioning real Azure infrastructure — Resource Groups, VNets, NSGs, and RBAC.
- Built and troubleshoot GitHub Actions CI/CD pipelines and Docker-based deployment workflows integrated with Nginx reverse proxy configurations.
- Currently completing an intensive DevOps training program (Azure, AWS, GCP, DevSecOps, MLOps); IBM-certified in Cybersecurity.

TECHNICAL SKILLS

Cloud & Azure — Microsoft Azure, Azure Landing Zone, Resource Groups, Virtual Machines, Virtual Networks, Network Security Groups (NSG), Azure RBAC, Azure CLI

Infrastructure as Code & Containers — Terraform, State Management, Remote Backend, Modules, Docker, Docker Compose

CI/CD & Version Control — GitHub Actions, YAML Workflows, Deployment Automation, Secrets Management, Git, GitHub, Pull Requests, Code Reviews, Release Management

Linux, Networking & Security — Linux, Ubuntu, Bash, SSH, systemctl, journalctl, Nginx, DNS, SSL/TLS, Server Hardening

Supporting Development — Python, Django, PHP, Laravel, REST APIs, MySQL, PostgreSQL

PROFESSIONAL EXPERIENCE

DevOps Engineer — Sipher Web Pvt. Ltd.

Jan 2026 – Present

Full-Time

- Own end-to-end production deployment and infrastructure management for 5+ live ERP, MIS, and Hospital Management Systems across VPS, Hostinger, shared hosting, and Linux environments.
- Configure and maintain Linux/Ubuntu production servers, including Nginx, reverse proxy, DNS, domain configuration, SSL/TLS, and application services.
- Manage Git and GitHub-based deployment workflows, including branching, merging, release coordination, and production deployments across multiple concurrent client projects.
- Perform production system and application troubleshooting using systemctl, journalctl, process monitoring, disk/memory analysis, and application logs to identify and resolve runtime and deployment issues.
- Manage production MySQL and PostgreSQL databases, including schema changes, backups, query optimization, and performance tuning to support reliable application operations.

Software Developer — NDMEAA Technology

Feb 2025 – Dec 2025

Full-Time

- Developed, deployed, and maintained production web applications across cPanel-managed and Linux hosting environments, including domain/DNS configuration, database setup, SSL/TLS, and application configuration.
- Developed and deployed 2 production e-commerce applications, Adgon and Aaps World, handling application development, deployment, hosting configuration, database setup, and post-launch maintenance.
- Maintained and enhanced ERP applications, implementing new features, database migrations, bug fixes, troubleshooting, and performance optimizations.
- Used Git and GitHub-based workflows for version control, branching, code changes, collaboration, and coordinated production releases.
- Worked across the application, database, and hosting layers, troubleshooting issues and supporting applications throughout the development-to-production lifecycle.

DEVOPS PROJECTS & HANDS-ON EXPERIENCE

Azure Landing Zone & Terraform Infrastructure Automation

Jan 2026 – Present

Stack: *Microsoft Azure · Azure Landing Zone · Terraform · IaC · Azure CLI · VNet · NSG · RBAC*

- Provisioned Azure cloud infrastructure using Terraform Infrastructure as Code (IaC) with reusable configurations and structured resource provisioning.
- Worked with Azure Landing Zone concepts covering resource organization, identity and access management, networking, governance, and scalable cloud infrastructure design.
- Provisioned and configured Resource Groups, Virtual Networks, subnets, Network Security Groups, Virtual Machines, storage, and RBAC using Terraform.
- Worked with Terraform providers, resources, variables, outputs, state management, remote backends, and modules for infrastructure lifecycle management.
- Practiced the complete Terraform workflow including init, validate, fmt, plan, apply, destroy, and state management, along with Azure CLI for cloud resource operations.

GitHub Actions CI/CD Pipeline

Jan 2026 – Present

Stack: *Git · GitHub · GitHub Actions · CI/CD · YAML · Docker · Linux*

- Built GitHub Actions CI/CD pipelines to automate application build, testing, and deployment workflows triggered by Git repository changes.
- Created YAML-based workflows using jobs, steps, triggers, environment variables, secrets, and deployment stages.
- Implemented Git branching and pull-request workflows for controlled application releases across Linux and Docker-based deployment environments.
- Troubleshoot pipeline failures, build errors, deployment issues, configuration problems, and workflow execution failures.

Dockerized Application Deployment

Jan 2026 – Present

Stack: *Docker · Dockerfile · Docker Compose · Ubuntu · Nginx*

- Containerized web applications using Dockerfiles, Docker images, containers, and Docker Compose for reproducible application environments.
- Managed Docker container lifecycle operations including build, run, stop, restart, logs, and cleanup.
- Configured Docker-based application environments on Ubuntu Linux and used Docker Compose to manage multi-container applications and service dependencies.
- Configured Nginx as a reverse proxy for containerized applications and integrated Docker deployments with Git-based and CI/CD workflows.

Multi-Client Production Deployment Infrastructure

Jan 2026 – Present

Stack: *Linux · Ubuntu · VPS · Nginx · Git · MySQL · PostgreSQL · SSL/TLS*

- Managed deployment and infrastructure operations for 5+ live ERP, MIS, Hospital Management, and SaaS systems across VPS, Hostinger, shared hosting, and Linux environments.
- Configured Linux servers, Nginx, DNS, domains, SSL/TLS, application environments, and production databases across multiple client systems.
- Performed production troubleshooting using SSH, Bash, systemctl, journalctl, process monitoring, log analysis, and disk/memory analysis.
- Managed application deployment, rollback, maintenance, and redeployment workflows while minimizing service disruption.

CERTIFICATIONS & TRAINING

- DevOps Insiders — Batch 18 — Azure, AWS, GCP, DevSecOps, MLOps | 2025 – Present
- Introduction to Cybersecurity Tools & Cyber Attacks — IBM / Coursera | 2024
- Cybersecurity Analyst Job Simulation — IAM & Platform Integration — Tata Group / Forage | Feb 2024
- Introduction to Generative AI — Google Cloud | 2024

EDUCATION

B.Tech — Computer Science & Engineering

Dr. A.P.J. Abdul Kalam Technical University, Lucknow, Uttar Pradesh | 2021 – 2025

Graduated July 2025
